Boilerplate

Boilerplate

C Header Guard

```
1 // code_tests.h
2
3 // Define header guard CODE_TESTS_H
4 #ifndef CODE_TESTS_H
5 #define CODE_TESTS_H
6
7 #define MY_MACRO 1<<5
8
9 void Run_Tests(void);
10
11 #endif
12 // End header guard</pre>
```

Java Setter & Getter

```
public class Car {
    private String color;
    public String getColor() {
        return color;
    }
    public void setColor(String c) {
        color=c;
    }
}
```

Python Decorators

```
1
2 def decorator1(function):
3    def wrapper(*args, **kwargs):
4        function(*args, **kwargs)
5        print("Coding is easy")
6    return wrapper
7 @decorator1
8 def decorator2(name):
9    print(f"{name}")
10 decorator2("python")
11
```

Java Annotations

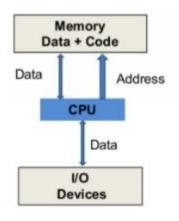

```
package test.test;

import lombok.Getter;
import lombok.Setter;

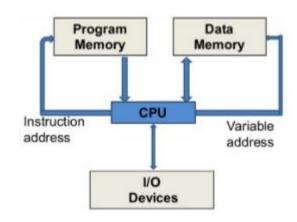

public class LombokTest {
    @Getter
    @Setter
    private String test;
}
```

Von Neumman Architecture

Harvard Architecture

"REPL": read-eval-print loop

➤ (define s (list 'cadr '(one two three)))

S

➤(CADR '(ONE TWO THREE))

> (eval s)

TWO

Ian Bicking

you risk being left with a program that only another highly skilled programmer can maintain

Project Builders

ng generate

- app-shell
- application
- class
- component
- directive
- enum
- guard

- interceptor
- interface
- library
- module
- pipe
- resolver
- service

dotnet new

Console Application console

Class library classlib

WPF Application wpf

WPF Class library wpflib

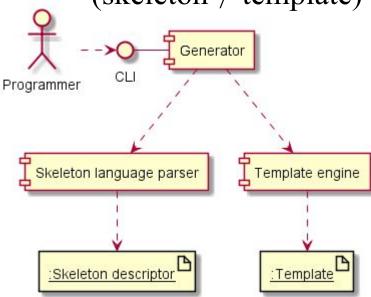

ASP.NET Core Web App

(Model-View-Controller) mvc

Project Builders

(skeleton ≠ template)

Levels of abstraction

Propuesta Creativa: GotenJS

GotenJS es un framework que se estructura en módulos que interactúan dependiendo de la tecnología a utilizar.

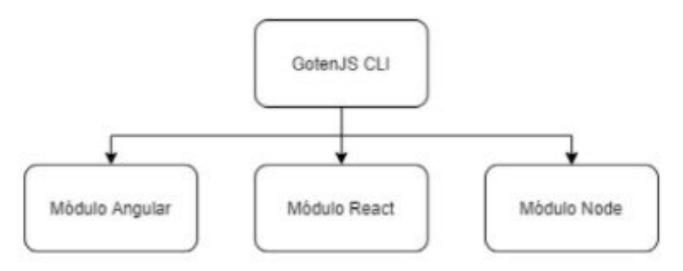

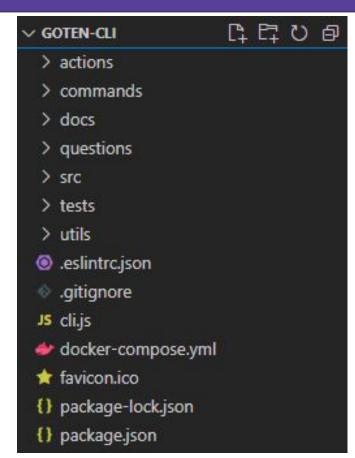

Fig. 1. Estructura modular de GotenJS

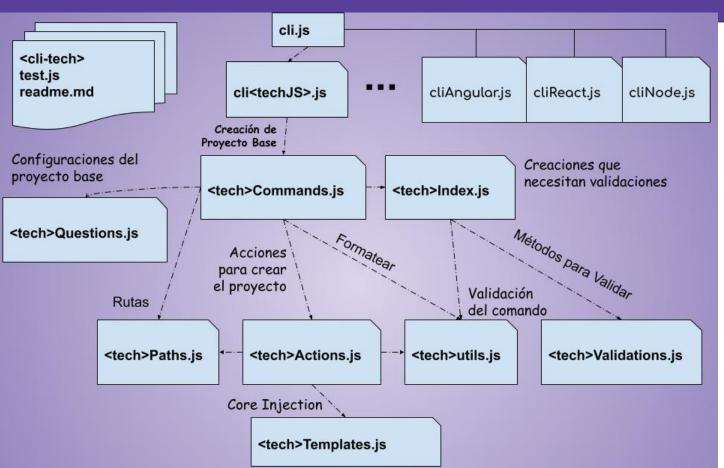

Estructura Estática

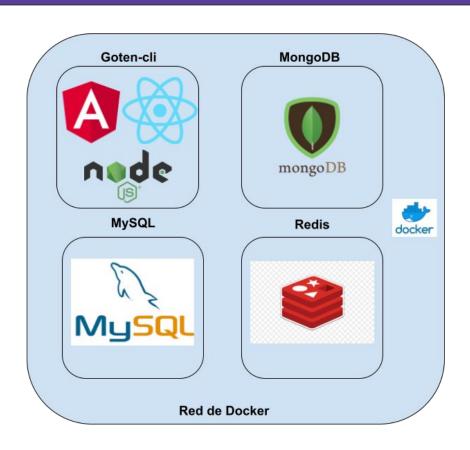

Estructura Dinámica

docker-compose.yml

Permite crear proyectos desde cero pudiendo elegir la tecnología a utilizar

Frontend: Angular o React (redux o context)

Backend: Node

Base de datos: MongoDB, SQL o MariaDB

GotenJS CLI

goten --help

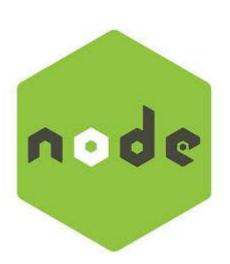

```
CYS:~/sandbox/proyectos/goten-cli/ goten --help
 Usage: goten [options] [command]
 Options:
   -h, --help
                                 output usage information
 Commands:
   new [options] <name>
                                 creates node project with express
   model [options] <name>
                                 creates model
   abm [options] <name>
                                 creates routers, controllers, middlewares, filters, dtos, assemblers, services and models
   db [options] <motor>
                                 configure database
   version
                                 creates versions routes
                                 run migrations (only sql)
   migrate
                                 adds authentication with JWT and role/attribute-based permissions
   auth
   new-react [options] <name>
                                 creates a react project
   abm-react [options] <name>
                                 creates react abm
   favicon <pathLocal>
                                 Assign a favicon to the browser, specifying a local path. Acceptable formats: ico, jpeg, jpg y png. Size: until 1000
×1000
                                 add resources to login: jwt, interceptor, private routes, redirects, etc
   auth-react
   new-angular [options] <name> creates angular project
   abm-angular [options] <name> creates angular abm
   favicon <pathLocal>
                                 Assign a favicon to the browser, specifying a local path. Acceptable formats: ico, jpeg, jpg y png. Size: until 1000
×1000
   auth-angular
                                 add resources to login: jwt, interceptor, route guard, redirects, etc
```

goten new

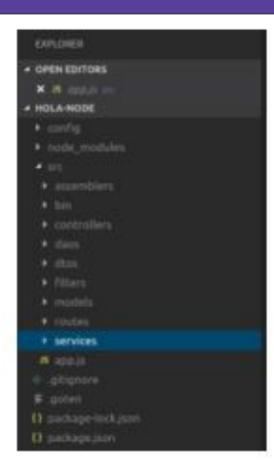

goten new

```
@CYS:~/sandbox/proyectos/goten-cli$ goten new hola-node
? Enter database engine mongo
? Enter port 3800
? Enter dbname hola-node
? Enter dbhost 127.0.0.1
? Enter dbport mongodb
? Enter dbuser (none by default)
Creando proyecto, espere unos instantes
```

Node - Arquitectura

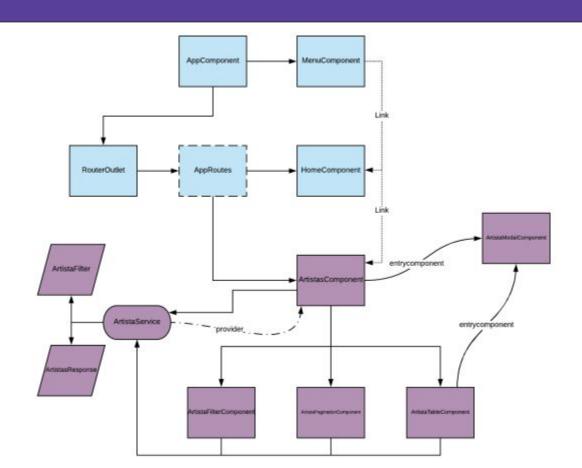

goten new-angular

```
acys:~/sandbox/proyectos/goten-cli/example/hola-angular$ goten new-angular --help
 Usage: new-angular [options] <name>
 creates angular project
 Options:
                             properties from model
    -a, --api <api>
   -p, --primary <color>
                             primary
    -d, --danger <color>
                             danger
   -s, --success <color>
                             success
   -i, --info <color>
                          info
    -w, --warning <color>
                             warning
    -S, --secondary <color>
                             secondary
    -h, --help
                             output usage information
```

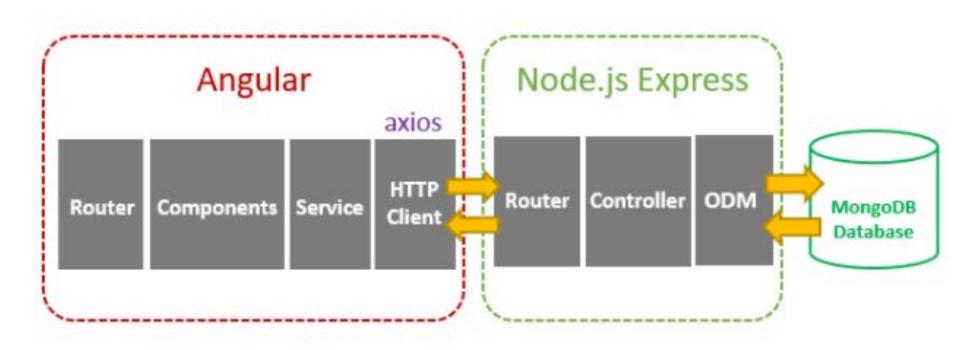

Angular - Arquitectura

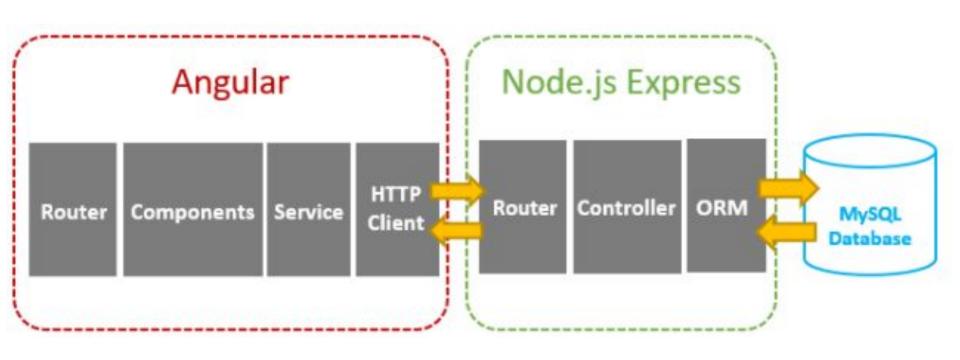

Arquitectura MEAN

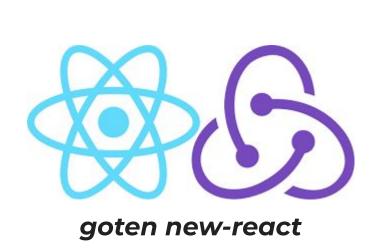

Arquitectura SEAN

React (Context-Redux)

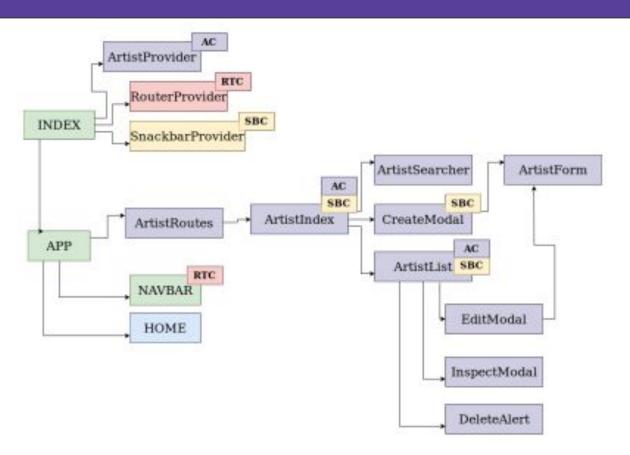

goten new-react

```
@CYS:~/sandbox/proyectos/goten-cli$ goten new-react hola-react
? define APIs URL http://localhost:3800/
[INFO] - Creando proyecto base en carpeta "hola-react"... Hecho.
[INFO] - Creando directorios... Hecho.
[INFO] - Creando componentes genéricos/reutilizables... Hecho.
[INFO] - Creando componentes... Hecho.
[INFO] - Creando archivos... Hecho.
[INFO] - Instalando dependencias... Hecho.
Finalizado.
```

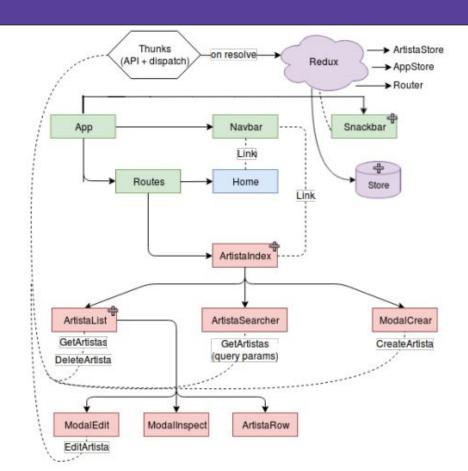

React-Context - Arquitectura

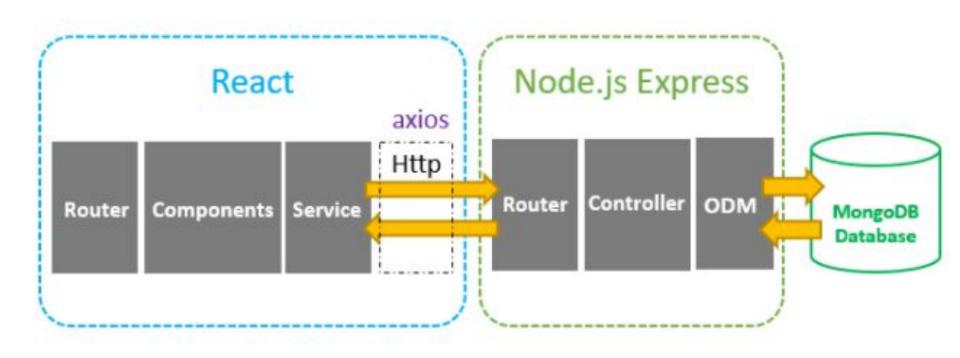

React- Redux - Arquitectura

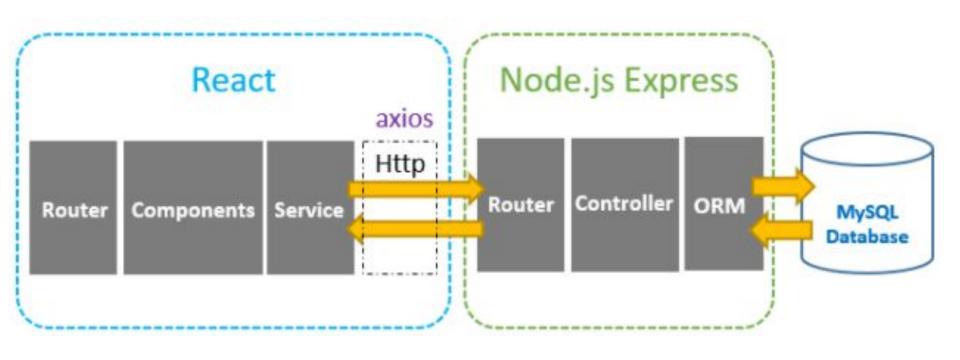

Arquitectura MERN

Conclusiones

- Reducir el tiempo de desarrollo de tecnologías basadas en Javascript
- Construir un ambiente de desarrollo con las herramientas necesarias en pocos minutos.
- Utilización de Docker para un ambiente limpio y transparente.
- Sistema completo de autenticación.
- Persistencia en db.
- Maquetado rápido para pruebas de concepto.

ipreduntas?

¿POR QUÉ TRABAJAR CON NOSOTROS?

- Muy buen ambiente de trabajo
- Flexibilidad horaria
- Equipos formados por excelentes personas y profesionales
- Charlas y capacitaciones para compartir el conocimiento
- Trabajamos con metodologías ágiles
- · Área de I+D+i
